March Pumps

March Pumps

Cal Pumps

Pumps by March Manufacturing, Inc.

Liquid Cooled March pumps:

These legendary pumps have epoxy encapsulated motors through which the pumped water flows in a copper nickel tube which cools the components. The unique seal-less pump end features an orbital magnetic drive on a ceramic shaft with a ceramic thrust washer.

These pumps are explosion proof and can run submerged or in the open air.

Specifications:

Calvert Engineering "CalPump"

Used for decades as a commercial fountain pump, the marine version of this pump is ideal for a wet bilge where moisture and explosive fumes may be a hazard - typically used as a continuous duty marine a/c pump.

Always mount this pump with the volute pointing down or to the side as shown to lubricate and cool the shaft. If the discharge barb is positioned as shown, air is more easily purged.

Like all centrifugal pumps they are not self priming and must be mounted below the waterline.

We suggest using full flow hose barbs so as to not restrict the flow. If you wish to throttle down the flow, never restrict the suction side of a centrifugal pump - this may cause impeller damage. You may restrict the discharge side to reduce flow at will.

From 320-1200 GPM in 115 or 230 volt.

Cal-Marine "MS" series:

These quality direct drive, centrifugal marine pumps feature a rugged bronze/stainless casing, an easily replaced nylon impeller mounted on a 304 stainless shaft with seal, all chrome plate and a double lip viton seal, all inside a heavy duty nylon volute.

Specifications and our Discount Prices - Cal MS series pumps

Prices include mounting bracket. Add \$14.95 for hose barbs.

S&H for all Cal pumps - \$18.95 to anywhere within the 48 contiguous states including Alaska, Puerto Rico and the USVI, \$38.95 to anywhere in Canada, \$69.95 worldwide by US International Priority mail.

Model	Voltage	H.P.	Amp	GPH@1'	3'	5'	9'	13'	List PRICE	OUR PRICE

Some advice and common sense about warranties:

As with most contracts, the first and most important thing to read in any warranty is the smallest print... unless it's a "No questions asked" warranty (which they never are). Almost all warranties are only as good as the honor of the company standing behind it.

I know of companies that have literally NEVER performed on their warranty because it is NEVER the fault of the product. "I know this compressor is only two months old, but it obviously failed from low voltage (or high voltage, or a lightning strike, or it's burned from a lack of cooling water - TAKE YOUR PICK!)".

The most wonderful sounding and comprehensive warranty can be absolutely worthless. In some cases they offer extended warranties for a handsome fee, which are again absolutely worthless with the wrong company - save your money! These are nothing more than a very lucrative alternate profit center!

We do not offer "extended warranties" for a fee and we do stand behind our products!
